SMXG - World Class

The 309th Software Maintenance Group (SMXG) at Hill AFB is a recognized world leader in “cradle-to-grave” systems support that encompasses software engineering, hardware engineering, program management, data management, consulting, and more...

BE AMERICA'S BEST

SMXG Workloads

CURRENT

- F-16 Operational Flight Program (OFP)
- Mission Planning Software (F-16, A-10)
- Theater Battle Management Core System
- Automatic Test Systems
- Space and C3I Software

FUTURE

- F-35, F-22
- Unmanned Aerial Vehicles

Needed Skill-Sets

- Programming Languages
- Virtualization
- Software Configuration Tool Set
- Database Driven Applications
- Software Architecture
- Sense and Avoidance Software
- Artificial Intelligence
- Quality Assurance and Testing
- Web Centric Application Development
- Software Assurance
- Software Security
- Certification & Accreditation
- Web Languages
- VMware
- Gaming Application Development
- Printed Circuit Board
- Robotics and Intelligent Systems

SMXG Staff

Hill AFB

- OFP development
- Aircraft improvement
- Radar (air/ground) development
- ICBM
- Aircraft Depo
- Test
- Mission planning
- Simulators

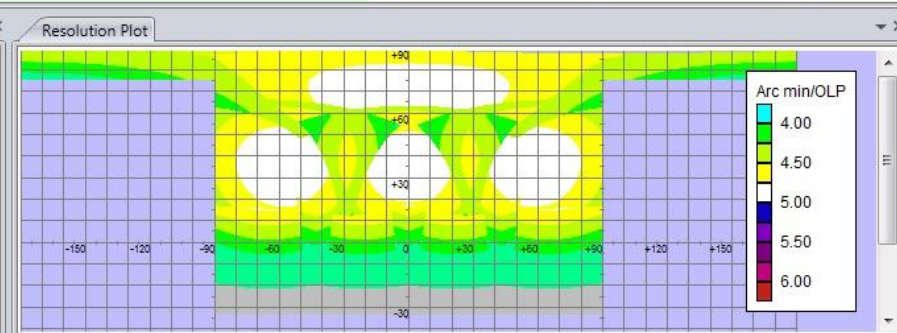

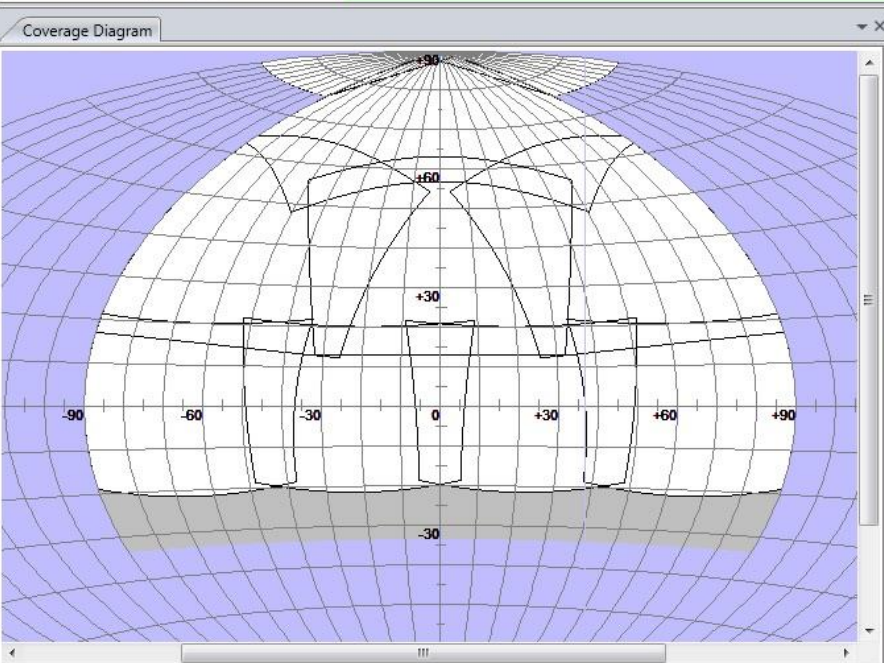

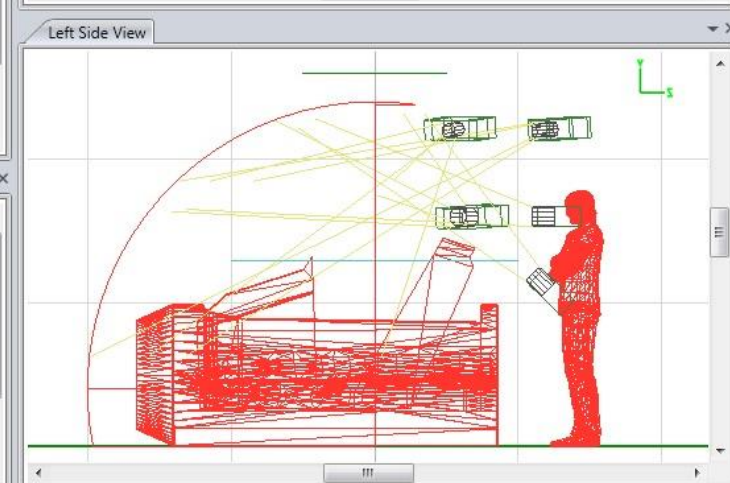

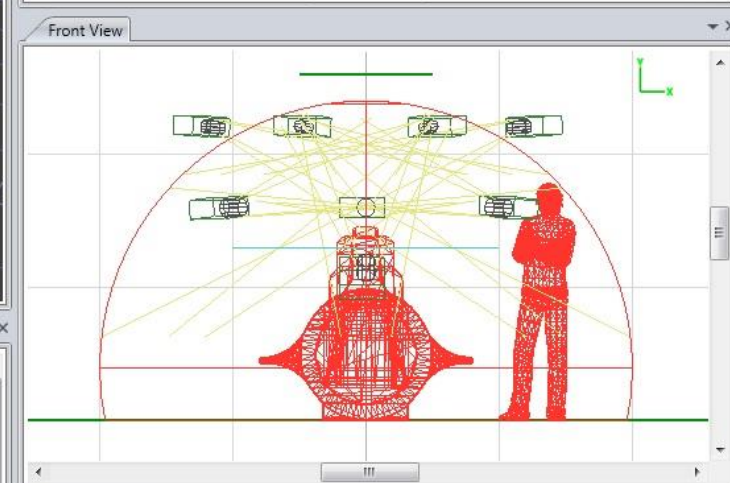

Hardware Designs

2.1 General Hardware

- Implementation Details (continued)
 - Kleine Brogel equipment layout (Release 2)

Hardware Designs

2.9 IOS Station

- Implementation Details
 - The IOS station will consist of six 32" monitors arranged as shown below.
 - Monitors will have a static contrast ratio of 1,200:1.

Lots of I/O
- Digital, Analog, Serial

Diverse work

This week

- Facility Layouts – Planning cable lengths and equipment placement
- International industrial power cord standards... fun
- License server setup
- Temperature fault debug
- Coding Distributed Interactive Simulation (DIS) interface
- 3D printing new throttle bracket

This year

- RTOS task priority inversion debug
- Weapon modeling
- Adding radar capabilities
- Adding software model for new radio
- Video recording capabilities
- Cockpit I/O interface
- HW purchases for 4 simulators

Diverse work

- Over 1,000 Engineers in building 1515
- Support 4 aircraft – F16, F22, F35, A10
- Work with pilots to flight test the upgrades
- Work on the international level

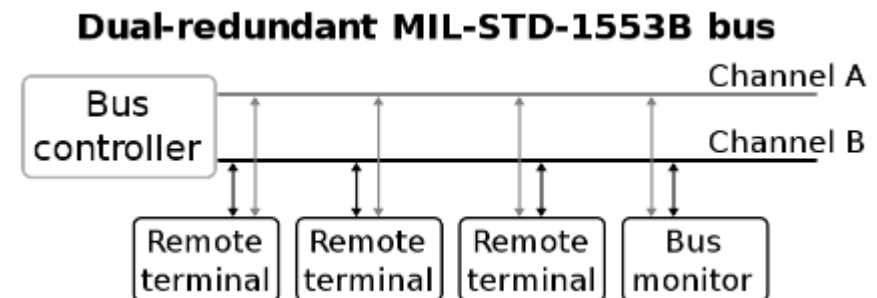

EPAF MLU F16 Architecture

- Modular Mission Computer – Main computers
- Fire Control Radar – Controls the Radar
- Wide Angle Conventional Head Up display – Cool data display... can highlight tracked entities
- JHMCS – Even cooler helmet mounted display
- Multi-Function Displays – Now in color
- Audio/Video Recorder – Mission Debrief
- Electronic Warfare Management System – Radar warning, and chaff/flare deployment
- Digital Terrain System – Navigate without GPS
- Up-Front Controls – Pilot interface to system
- Radios – Data, communication, identification, navigation
- Flight Control
- Navigation system
- Most of the embedded systems are Line Removable Units
- Integrated test stands have all the real hardware of an F-16 strung out in 19" racks
- Other test stands simulate most of the LRUs
- Big money to make changes like getting rid of old code because of the amount of testing involved

MIL-STD-1553

- is a military standard that defines the mechanical, electrical, and functional characteristics of a serial data bus. It was originally designed as an avionic data bus for use with military avionics, but has also become commonly used in spacecraft
- It features multiple (commonly dual) redundant balanced line physical layers, a (differential) network interface, time division multiplexing, half-duplex command/response protocol, and can handle up to 30 Remote Terminals

Simulator Complexities

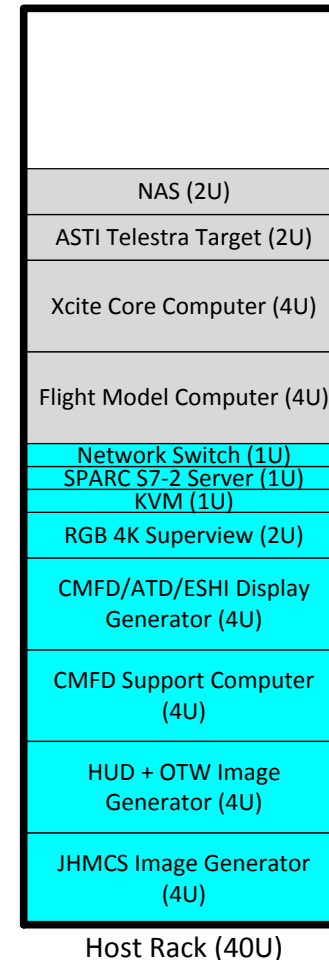

- Run real code or simulate?
- Run real LRU hardware or x86?
- Night Vision Goggles – How would you do it?

Hardware Designs

2.7 WST Host

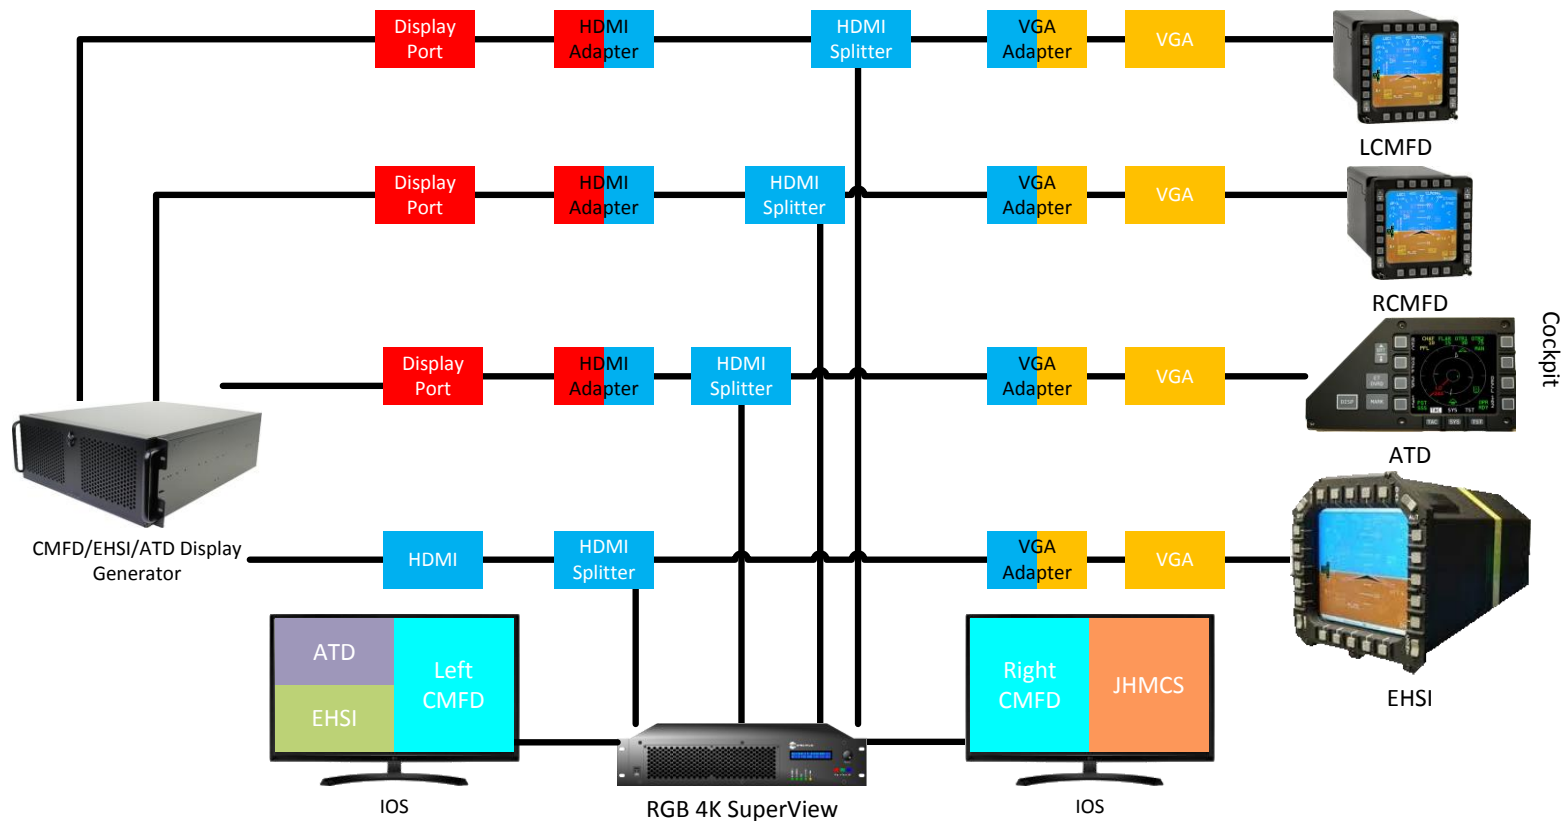

- Implementation Details
 - An Oracle S7-2 SPARC rackmount computer will serve as the host server.
 - A Standard Rackmount Computer will generate CMFD, EHSI, and ATD displays.
 - A second Standard Rackmount Computer will support the CMFD display generator.
 - Two Standard Rackmount Computers will generate HUD + OTW and JHMCS displays.
 - An RGB 4K Superview video mixer to combine video sources for the IOS.
 - The above hardware will be housed in the Host Rack.

Hardware Designs

2.7 WST Host

- Implementation Details (continued)
 - CMFD, EHSI, and ATD display diagram

Distributed Interactive Simulation

- IEEE standard for conducting real-time platform-level wargaming across multiple host computers and is used worldwide, especially by military organizations but also by other agencies such as those involved in space exploration and medicine.
- Everything from position to appearance, sensors, radio communication, launches and detonations
- Missions can involve thousands of entities – real or constructed
- Dead reckoning algorithms used to efficiently transmit the state of battle field entities

Realistic training

Realistic Training

Other Jobs

- OFP developer
- Test
- System Engineer
- Mechanical Engineering
- Ground Based Radar
- Minute Man Missile
- Mission Planning
- UAV ground station
- Universal Simulator
- UAV simulators
- Simulation is a growing field!

Job Benefits

- **Job Stability**
- **10 paid days of holiday leave**
- **Accrued vacation/sick leave**
- **3 hours fitness leave per week**
- **Full health care benefits (dental and vision)**
- **Worldwide Career Opportunities**
- **Compensation for overtime**
- **Competitive retirement system**

Why is This Job Fun?

- Wingman Activities
- Base Facilities
 - Travel
 - Tickets and Entertainment
 - Government Discounts
 - Rentals
- Training
- Challenges
- Problem Solving

Hill AFB Hiring Forecast

- U.S. Federal Govt. is Nation's Largest Employer
 - Largest employer of engineers and scientists in the world
- Hiring 150 Scientists & Engineers each year
 - Electrical Engineers
 - Computer Engineers
 - Computer Scientists

Pathways Internships

- Targets students completing sophomore/junior year in:
 - Electrical and Computer Engineering or Computer Science
- Work summers or off-track
 - Part time during school is optional
- Non-competitive conversion to permanent positions
 - We place nearly 100% of our PIs
 - Best PIs selected into PAQ/SMART Programs
- Starting salary is \$13.84 per hour
 - May promote to \$15.49 per hour after one year
- You must apply through usajobs.gov
- POC: Cassie Unguren, 777-9802, casaundra.unguren@us.af.mil

How to Apply for Jobs at Hill AFB

- Go to <http://www.usajobs.gov>
 - Lists all Federal jobs worldwide
- In the “Where” block, enter Hill AFB, UT
- Click on the blue “Search” key – it will show all jobs within 20 miles
- Read entire announcement and follow “How to Apply” directions carefully.
- Video instructions available on YouTube

PAQ

(Palace Acquire Program)

- Students apply the fall of their senior year
- Benefits
 - Signing bonus ~ \$11,000
 - Student loan repayments – up to \$20,000
 - Master's Degree
 - Pays tuition and books for 3 semesters
 - Full salary while going to school
- Requirements
 - US Citizenship
 - GPA: 3.5+
- We hire about 40 PAQs per year

SMART Program

(Science, Mathematics, and Research for Transformation)

- Great Benefits – Highly Competitive
- BS, BS/MS, MS, and PhD Degrees
- Apply August through December
 - Full tuition and \$1,000 book allowance
 - \$25,000 to \$38,000 yearly stipendium
 - Paid summer internship - \$1,200/wk living expense
 - Post graduate employment (1:1 repayment)
- We target juniors in concurrent BS/MS programs
- We awarded 8 scholarships for Hill AFB this year
 - Worth \$650,000
